 $925 \cdot 642 \cdot 4558 \diamond$ calvincramer at gmail \diamond Remote, USA

EXPERIENCE

Wind River Systems	. Sep 2019 - Current
Member of Technical Staff	Alameda, CA
Backend, frontend, cloud relating to virtual twin projects, VxWorks RTOS develop	oment, mentor interns
Vessel Assist	Feb 2016 - Sep 2018
Deck Hand	Bethel Island, CA
Practical work experience in small teams focusing on safety, planning and communication	

EDUCATION

Georgia Institute of Technology M.S. in Computer Science in Computing Systems	August 2021 - May 2024
University of California, Davis B.S. in Computer Science	Sep 2017 - Jul 2019

SKILLS AND KNOWLEDGE

Computer Languages	Golang, Python, Bash, Rust, Javscript, Typescript, Java, C, C++, Matlab,
	R, TI-BASIC, Lisp, Prolog
Other	docker, kubernetes, Svelte, REST, HTML, CSS, SASS, socket.io, SSE, nginx,
	Qemu, GitLab CI, Jenkins, git, gdb, make, Ghidra, PIN, opencv, Keras,
	PyTorch, ROS, Java Swing and AWT, ImGui
Relevant Courses	Malware Analysis, High Performance Comp Arch, Software Engineering,
	Computer Vision, Compilers, Programming Languages, Algorithms, Ma-
	chine Learning, Operating Systems

PROJECTS

- · Full stack app to run and interact with OS simulations, using socket.io for real-time communication.
- Reverse engineer old Win32 virus. Make Ghidra plugins to generate def-use info, and data dependence graph. Make PIN tools to generate execution trace and dynamic control dependence graph.
- \cdot Created optimizing compiler for simple language targeted for 32-bit MIPS
- Self-driving car research: studied the fundamentals of lane-line detection using computer vision, neural networks, object localization and classification, image segmentation, state estimation using Kalman filter, and PID controllers. Researched state-of-the-art deep CNN based methods for lane-line detection and classical computer vision approaches.
- · Project Euler 135 problems solved since 2017 example of solved problem: projecteuler.net/problem=144
- $\cdot\,$ Created TUI security component configurator for VxWorks RTOS
- $\cdot\,$ Contributed to Department of Defense's Iron Bank program
- \cdot Worked in team of 9 to develop map creation tool for a recreation of Warcraft II (1995) game
- · Designed 15-bit RISC CPU using Logisim with a Fetch-Decode, Execute-Writeback architecture
- · Developed a unix shell that supports background processes, piping, and input/output redirection
- · Developed a thread library with TPS, preemption, and semaphores for multithreaded synchronization
- · Implemented a FAT-like file system with block-level access to a binary file
- \cdot Implemented 32-bit FP calculator using only integer arithmetic in MARS MIPS simulator
- $\cdot\,$ Ported Theseus and Minotaur game to TI-84 Plus using TI-BASIC with little memory and slow CPU
- $\cdot\,$ Implemented a sorting algorithm visualizer in a step-wise sorting fashion for common sorting algorithms
- \cdot Implemented the common snake game with ANSI escape sequences to run inside a terminal
